

# Chaos 1

Completed 1974

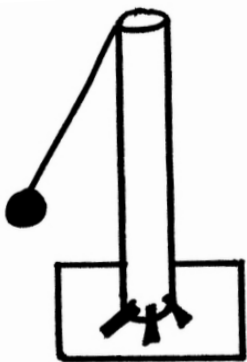

- Chaos 1 was created from scrap metal, much like your creations for these STEAM activities are from objects around your house or classroom.
- **Goal:** Your task is to create a sculpture that moves.
- **Think About Your Structure:** Think about some of the supplies and objects you can use to create moving parts. Which supplies will work well together to create movement? Will the movement be on the ground or hanging up high?
- **Hint:** If you are creating a sculpture that moves up high, think about using yarn or string to create movement. If the sculpture will have movement on the ground, perhaps use a ball or marble to roll.
- **Now What?** Once your sculpture is completed, take a look at the sculpture from different views (above, beside, below) and see how different the sculpture can look and move. What types of angles and shapes did you see through the movement?

---

---

- Paper Towel Roll
- Yarn
- Ball
- Painters Tape
- Cardboard Box
