

# Cummins Corporate Office Building

Completed 1984 - Renovation 2020

- One reason the Cummins Corporate Office Building looks so spacious is because of the windows and skylights which let natural light into the building.
- **Goal:** Your task is to create a structure that has a skylight.
- **Think About Your Structure:** What material will you use for the walls to make sure you can create an open space representing the skylight?
- **Hint:** What will be the best way to create the open space for the skylight? Maybe use Legos to leave space for an opening or construction paper that you can cut a skylight out of. There are lots of ways to create an opening so be creative!
- **Now What?** Think about how the structure's stability was changed based on the skylight opening. Is there more light inside the structure with the skylight? What are the benefits to having natural light in a space?

- Popsicle Sticks
- Blocks
- Painter's Tape
