

# Halcyon

Completed 2011

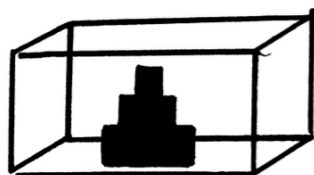

- Columbus Regional Hospital was damaged in the flood of 2008 and Halcyon was created to represent
- **Goal:** Your task is to create a structure that can withstand pouring a cup of water on top of it.
- **Think About Your Structure:** Your structure will need to withstand the water poured on top of it, so it needs to be very sturdy as well as be made of a water-resistant material.
- **Hint:** You will need to contain the water that you pour on top. Try building your structure in a plastic bin to contain the mess!
- **Now What?** Why would an architect need to take special considerations, like withstanding floods and fires, when designing a building?
